DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 and 21-26, drawn to a method of recognizing punctuation in a computer-implemented speech recognition, classified in class 704, subclass 231.
 - II. Claims 14-20, drawn to a method of correcting incorrect text associated with recognition errors in computer-implemented speech recognition, classified in class 704, subclass 244.
 - III. Claims 27-31, drawn to a graphical user interface for correcting incorrect text associated with recognition errors in computer-implemented speech recognition, classified in class 704, subclass 270.
2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as recognizing punctuation in a computer-implemented speech recognition, subcombination II has separate utility such as correcting incorrect text associated with recognition errors in computer-implemented speech recognition, and subcombination III is directed toward a graphical user interface. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a).

Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
